GIS Specialist with over six years of experience delivering GIS projects. Advanced user of ArcGIS Pro, QGIS, and ESRI mobile tools, including Field Maps and Survey123. Skilled in producing high-quality maps, spatial analysis, and enterprise data management, with hands-on experience managing PostgreSQL/PostGIS geodatabases and applying data standards to ensure accuracy and consistency. Strong expertise in FME and Python, including ArcPy and GeoPandas, to automate workflows and improve project efficiency. Experienced in working with aerial imagery, remote sensing, and Ordnance Survey datasets to maintain and update geospatial information. Proven ability to collaborate effectively across multidisciplinary teams, solve problems, maintain strong attention to detail, and deliver high-quality outputs that support stakeholder decision-making.

Work Experience

RMSI

UK

GIS Engineer

Nov. 2025 — Present

- Process and manage large-scale spatial datasets from local authorities and government sources.
- Design, develop, and maintain production-ready FME Workbenches to support the spatial charge digitisation and transformation, attribute mapping and schema alignment to data standards.
- Perform advanced spatial operations, spatial joins, overlays, snapping, buffering and topology validation.
- Perform quality assurance, and topological checks to ensure accuracy and consistency.
- Contribute to digitisation workflows, aligning with data specifications and project standards.
- Collaborate with the data and QA teams to resolve mapping or attribute discrepancies.
- Prepare maps, reports, and spatial deliverables as required by project managers.
- Managed and maintained web GIS content, including layers, maps, and applications within ArcGIS Enterprise, ensuring data integrity and accessibility.

Cyient Europe Ltd

UK

GIS Technician

Nov. 2023 — Nov. 2025

- Produced geospatial databases with more than 96% accuracy to support project delivery.
- Managed thousands of utility records in accordance with the land and asset requirements of the UK.
- Updated geospatial data using aerial photography, remote sensing imagery, and Ordnance Survey datasets to reflect real-world changes.
- Identified and resolved technical mapping errors, which resulted in about 20% less rework.
- Actively contributed to weekly meetings, providing insights and technical recommendations to cross-functional teams.
- Used SQL for data management and technical reports.
- Performed georeferencing on historical and current maps to align spatial data with real-world coordinates.

Centre for Education, Culture and Research Institute

Iran

GIS Analyst

Sep. 2019 — Aug. 2023

- Enhanced data management by creating comprehensive metadata for 100+ GIS projects, ensuring consistency, accessibility, and improved data quality across the organisation.
- Collected data using Field Maps and Survey123 for producing detailed technical maps in GIS applications and spatial analysis projects.
- Developed spatial models using Esri software for supporting environmental, infrastructure and climate change projects.
- Improved analytical reliability by conducting decision-making analysis using raster and RS imagery, including classification, and change detection.
- Cleaned and processed large geospatial datasets using Python, reducing manual data preparation time by 40% through automation.
- Developed and deployed interactive web GIS applications using Experience Builder and ArcGIS Online to support data visualisation, stakeholder engagement, and decision-making.
- Executed advanced SQL queries and managed spatial datasets using PostgreSQL/PostGIS, increasing data retrieval and processing performance by 25%.
- Created 3D maps using R programming, leading to clearer and more effective presentations for stakeholders.
- Performed site suitability and geospatial analysis that informed location decisions for multiple development projects, increasing project efficiency and reducing evaluation time.

University of Guilan

Iran

Research Assistant

Jan. 2016 — Sep. 2018

- Supported methodology and hypothesis development.
- Conducted interviews and gathered data from a variety of communities.
- Prepared thematic maps using advanced cartographic techniques with Geographic Information System.

Education

The University of Guilan

Master's degree in Geography and Rural Planning

Thesis: Agricultural land use pattern and development path using GIS. Score: 19.12/20, GPA: 16.63/20 excluding thesis.

Guilan, Iran

Sep. 2015 — Aug. 2019

The University of Guilan

Bachelor's degree in Geography and Urban Planning

GPA: 15.47/20

Guilan, Iran

Sep. 2011 — Aug. 2015

Skills

GIS	ArcGIS Pro/Desktop, QGIS, AutoCAD, ArcGIS Enterprise, ArcGIS Online
Data Management	PostgreSQL, PostGIS, FME
Programming	Python, SQL, R Programming
Office Tools	Excel, Word, PowerPoint, Outlook, Teams
Soft Skills	Teamwork, problem-solving, critical thinking
